

PROFESSIONAL SUMMARY

A certified Technology Specialist/Security Analyst having 8+ years of experience in IT industry (Financial Institutes, Retailers, IT service providers) with extensive hands-on experience of Server Build, Configuration & Virtualization (VMWare vSphere), System Administration & Network Management, monitoring security violations, organizations can identify vulnerabilities in their systems, An in-depth understanding of system security, including the creation of policies, implementation, and enforcement of safe code practices, Keeping valuable assets protected from malicious actors helps protect the company's valuable assets.

Possesses excellent oral and written communication, presentation, and organizational skills. Recognized for demonstrating multi-tasking ability, teamwork and working under pressure in a fast-paced environment.

TECHNICAL CAPABILITIES

Server Virtualization	VMware vSphere ESXi 5.5, 5.1, 5.0/4.1, ESX 4.0/3.5 Servers, vCenter Server, Update Manager, Guided Consolidation, vCLI, Microsoft Hyper-V Server Migration using VMWare vConverter & Plate Spin (P2P, P2V, V2V)
Operating Systems	Windows server 2016 and 2019, Windows Servers 2012, 2008R2, 2008, 2003, 2000 and Workstations (Window 7/Vista/2000 Professional/XP)
Shared Storage	Storage Area Network (SAN) – HP Storage Work EVA 6400/8400: HP Command View, IBM System Storage Manager DS 4800, EMC Clariion CX4 480, SAN Switch (Brocade), NAS, QLogic SANsurfer HBA Manager, MPIO, Web tool, RAID, SCSI, LUN, NFS, VMFS
Applications	Active Directory Domain Services, SCCM/SCOM, MS-SQL Server, SharePoint, MS-IIS, MS- Exchange/Outlook, MS Office Suites
Management Tools	Symantec Net-Backup, BMC Patrol Agent, IBM Tivoli, McAfee Antivirus, Symantec Endpoint, BMC Remedy, CA Unicenter, HP Smart Start, Dell Open Manage & IBM Server Guide, Jenkins Pipeline, ACCP Right Lane, Azure TFS Pipelines,Varonis
Deployment Tools	Jenkins Pipeline, ACCP Right Lane, Azure TFS Pipelines
Networking	DNS, DHCP, SNMP, TCP/IP, IPv4/IPv6, VLAN, WireShark
Hardware	HP (Proliant DL 360/380/385/ G4/G5/G6/G7/G8, Blade chasis 7000), Dell PowerEdge 1850/2850/2950, Blade Server M600, chasis M1000e , IBM (xSeries 3850/3650/3550, Blade HS20/21/22)

EDUCATION & PROFESSIONAL TRAININGS

- Bachelor of Science (BS in Electronics Engineering)
- MCSE Active Directory Windows Server 2012
- VMWare Certified Associate

- Citrix XEN APP Training
- VMware vSphere Install, Configure and Manage Training
- SAN Training – HP EVA 8000/8400, IBM DS4800
- Certified Information system Security Professional (CISSP-2023)
- Google Technical Support Fundamentals
- Best Employee Nomination

PROFESSIONAL EXPERIENCE

Infrastructure Analyst
First Canadian Title Insurance, Oakville

Nov2023 – Still Present

- Manage the infrastructure of System center Operations Manager for UAT and PROD
 Here's the revised version including your Azure DevOps experience:
- Oversaw the infrastructure of System Center Operations Manager (SCOM) for both UAT and PROD environments, ensuring optimal performance and reliability.
- Developed and authored custom management packs in SCOM, enhancing monitoring capabilities through tailored solutions.
- Created custom monitors and rules using Visual Studio Extensions (VSE) and scripting to improve system oversight and alerting accuracy.
- Scheduled and generated tailored build reports through PowerShell scripts, streamlining reporting processes.
- Managed the Varonis infrastructure, including policy development and implementation to strengthen data security.
- Proactively addressed security alerts and threats generated by Varonis, implementing resolutions to mitigate risks effectively.
- Administered Group Policy Objects (GPOs) and modified configurations to align with evolving business requirements.
- -Automated daily tasks using PowerShell, significantly increasing productivity and efficiency within the environment.
- Managed Azure resources, subscriptions, and policies, ensuring compliance and optimal resource utilization.
- Created and maintained Azure TFS pipelines to enhance continuous integration and deployment processes.
- Utilized Azure DevOps for project management, automating workflows and enhancing collaboration across development and operations teams.
- Designed and implemented recovery tasks within SCOM to ensure system resilience and swift recovery from incidents.

Senior System Security Analyst
Bank of Nova Scotia, Toronto

Feb2022 – Nov 2023

- Assess threats to various internal codes by running the scan.
- When using agile methodologies or DevOps, be sure to adhere to the proper security standards.
- An understanding of Jenkins, Right Lane, and Azure Dev Pipelines
- Performing manual releases of the code in Development, IST, User Acceptance Testing, and Production environments.
- Establish strategies and standards for providing value to assets through the maintenance of the highest standards of security.
- Maintain the integrity of the code at all stages of development and deployment Ensure that all code components are efficiently and effectively tested to ensure that they are compatible and secure.
- Protect the environment from unapproved code changes.
- A variety of pipelines, including Azure TFS pipeline, Jenkins, and ACCP Right Lane, have been used for the deployment of the code.
- Implement and create Security Policies for secure code practices aligning with company objective.

System System Support Specialist
Bank of Nova Scotia, Toronto

June 2015 - Feb2022

- Manage IBM server and perform firmware update.
- Implementation of Citrix XEN APP 7.15 in Prod, maintain it and provide end to end support.
- Support and maintain Citrix XENAPP 6.5 Farm
- Installed and upgraded server management tools like Netbackup client (Symantec), SCOM and Antivirus, SCCM agent.
- Worked closely with SCOM admin, resolve and fine tune the alert management.
- Work on various Projects and Perform server build in DMZ Environment, ensuring that project meet with deadline.
- Prepared HOW TO documents for specific installations and upgrades and shared knowledge with other team members.
- Windows OS administration- Trouble shooting /Assisting application team, Resolving Performance issue, work endlessly to resolve P1.
- Manage the windows patching and keep the server compliance with latest updates.
- Provide support to various application during code and upgrading the code, testing, and upgrading the software currency of application.
- Participate in annual DR activity.
- Managing on Premises VMS on Private Cloud and Public Cloud.
- Troubleshoot GPO and Audit score to bring the server in to Compliance.
- Maintain Windows Virtual server and physical server.
- Maintain Windows file server and shares across the Global
- Build Power shell scripts and automate day to day task.

Senior Technology Specialist
GTL Consulting, Mississauga, ON, Canada

Sep 2013 – June 2015

- Managed infrastructure environment of 500+ servers (Physical/Virtual)
- Worked with solution providers and implemented whole project as per design documents.
- Participated project follow up meetings, discuss roadblocks and met timelines for project delivery.
- Performed troubleshooting during deployment and proposed alternates in case of issues.
- Upgraded ESX hosts from ESX4.0 to ESXi5.1 by Update Manager

- Performed Migration (P2V, V2V, Cold migration) as per approved change by VMWare vCenter Converter and by PlateSpin (Migrate)
- Installed and configured ESX i5.0 hosts (Standard/distributed switches, SAN/iSCSI datastores)
- Deployed OS by WDS / SCCM /Altiris (Both physical and virtual environments)
- Managed remotely rack and blade servers (Dell, IBM) through iDRAC, IMM and KVM Switches
- Installed and upgraded server management tools like Netbackup client (Symantec), Patrol Agent (BMC), Antivirus (McAfee, Symantec End Point etc.), SCCM agent etc.
- Installed, configured and managed SAN switch (Brocade) for HP EVA 6000
- Administered SAN by Command View, created and assigned V disks to ESXs and Windows hosts
- Worked closely with Storage Management and provided them all technical details related to hosts (Size of LUNs, WWN) and made sure for visibility of LUNs at host side
- Added new Domain Controllers in existing Forest and established user accounts, moved objects to their relative OUs as per requirements.
- Configured DNS servers to create new Zones and up dated host records.
- Created and configured GPOs for systems and user authorization
- Worked in ITIL based environments and created Change Requests through BMC Remedy and provide implementation plan to Change management (CAB)
- Coordinated with other team members for Weekly Team meeting and posted minutes of the meeting on SharePoint.
- Prepared HOW TO documents for specific installations and upgrades and shared knowledge with other team members.

System Administrator
Rogers Communication Inc., Brampton, ON, Canada

Feb 2012 – July 2013

- Installed and Configured Virtualization platform for over 4200 Virtual server infrastructure
- Configured ILO and iDRAC for remote management of rack and blade servers (Dell, HP)
- Installed and configured twenty four, 10 ESX5.0 nodes clusters (Dell hardware)
- Installed V Center Server 5.0 and configured it for HA and DRS
- Performed migration of 125 physical Servers to Virtual servers using VMware vCenter Converter
- Built and configured physical and virtual servers for Windows 2003/2008/2008R2.
- Installed and configured MS-SQL2008 in cluster mode (Physical and virtual environment)
- Created and configured Availability Groups (AlwaysOn Availability) MS-SQL2012 EE
- Provided Tier3 support to Service Desk and resolved day to day operation issues.
- Worked as On Call SME (24/7) and handled Sev1/Sev2 tickets and made sure for timely resolution as per SLA.
- Dealt with Vendors for hardware replacement and maintenance issues (Dell, HP, VMWare etc.)
- Performed system and software upgrades, patches, firmware etc., by documenting steps needed and coordinated changes through a formal change management process.
- Set up new users' profiles, created and updates access permissions and system policies and maintained user accounts. Defined procedures for user access to the systems
- Investigated internal and off-site issues reported by users in a timely and efficient manner
- Assisted with troubleshooting, research, documenting and resolving technical issues relating to Operating System, network connectivity, Active directory, TCP/IP and various complex system issues
- Created floor plan and network diagrams using MS Visio
- Issue appropriate Engineering documentation when network changes, extensions or new technologies are being deployed, i.e. HL design, MOPs among others

VMWare Administrator
TELUS Communications Inc., Toronto, ON, Canada

Sep 2010 – Jan 2012

- Performed migration of 80 + physical servers to Virtual Servers by using VMWare vCenter Converter
- Installed and configured ESX4.0 hosts and worked with storage team for hard zoning and assigning of Virtual disks to the hosts.
- Installed and configured vCenter Server 4.0, created clusters and configured them for HA and DRS

- Built and configured Windows servers (physical and virtual)
- Installed and configured update Manager for patch management
- Provided 3rd level support for day-to-day software and hardware issues.
- Contributed towards the Disaster Recovery Plan (DRP), back-up systems and disk configurations.
- Created and configured accounts, group authentication rights, security templates using Active directory as per requirement.
- Provided backup and restore processes including processes for DR.
- Investigated and provided timely and efficient online support for a fast-paced environment.
- Logged and tracked tickets using Remedy to ensure timely resolution in accordance with SLA.
- Configured user and group privileges, access control, and authentication.

Systems Administrator
Mobilink, Karachi, Pakistan

Aug 2009 – Jul 2010

- Administered and managed shared storage Fiber channel SAN – HP EVA 6000
- Configured new host for SAN Switch - Zoning
- Configured Storage Groups (Command View)
- Created new virtual disk and present them to host.
- Expended a LUN to create meta-LUNs.
- Created Mirror View Synchronous and Asynchronous images.
- Managed and configured SAN Switch and HSVs (Storage processors)
- Troubleshooting issues related to Servers, Network Switches and SAN Switches. Worked with Vendors to make Blade Servers into a Cluster to provide redundancy and load-sharing with no downtime.
- Assembled, installed, and supported several Desktop's, Laptop's, and PDA's
- Configured user and group privileges, access control, and authentication.
- Prevented data leakage by ensuring all hard drives were wiped according to DOD using Norton Ghost
- Installed and troubleshoot Windows 2000 and XP operating systems, MS Office, and other software packages.
- Installed HP Multifunctional Product (MFP) – Printer, Scanner, Photocopier and Fax
- Administration and tuning of Windows based Server Infrastructure including Windows NT/2000, Exchange 2003/2007, IIS, SQL, and backup using Archserve and NetBackup based technologies.
